TRAILER SERIES

PROFESSIONAL TOWABLE WASHER

Compare The Features Designed to Match Your Hydro Tek Washer Perfectly

■ Powder Coated 6" Frame:

Hydro Tek's advanced "pro-TECT-it" frame of powder coated, heavy gauge, welded steel is the ultimate in corrosion resistance. The frame is constructed with a structural tube spine for extra rigidity. All trailers can be converted to skid mount for flexibility and truck mounting.

■ Suspension:

Toflex axles deliver up to 300% more wheel travel than leaf spring axles to create a smooth ride over rough terrain. This adds to the life of your pressure washer and reduces fatigue on you and your tow vehicle.

■ Tank:

Hydro Tek's exclusive seamless polyethylene supply tanks with stainless hold down straps provide secure water storage. Dual tanks on the 370 and 540 gallon trailer offer internal baffling to reduce water sloshing and allow for the water tank to be split to carry two different types of fluid.

■ Lights/Wiring:

Shock-mounted lights are recessed and sealed for added protection from road hazards. All wiring is routed through the trailer spine to eliminate damage to the electrical system and add years of trouble free operation.

■ Storage:

The integrated storage tube for spray wands and storage tray at the rear of the trailer offer a safe and secure area to store Hydro Tek Accessories. Optional integrated ladder rack and soap pail rack are available to customize a trailer to fit your needs.

■ Coupler/Chains/Jack:

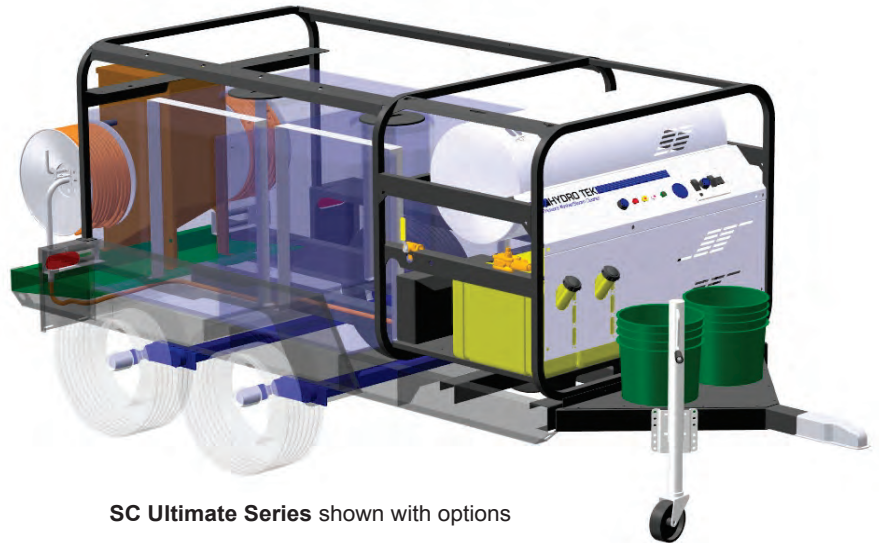

Save time every time you hook up the trailer to your tow vehicle with chains and a jack that quickly swings up and out of the way. Oversized casters allow for easy movement when away from the two vehicle.

■ Water Filter/Valves/Hoses:

Self-cleaning water filter with water drain valve supplies clean water to the pump to increase pump life. Complete plumbing and hoses, sized properly to your Hydro Tek washer, are included. Panel mounted 3-way valve on Ultimate trailers allows switching from float tank to bulk tank supply. Pro Line trailers route the pump bypass to the bulk tank to keep the pump cool. Hoses are routed through grommets and trailer frame to protect from chaffing and road hazards.

■ Optional Accessories:

Hose Reels, Sand Hopper, Ladder Rack, Chemical Rack, Chrome Wheels, Advertising Panels, Brakes, Machine Covers.
